ABSTRACT

In September 1981, a study was conducted to determine the number and proportion of students entering Kapiolani Community College in fall 1979 who: (1) attended only one semester (non-persisters); (2) attended two or three consecutive semesters, dropped out and never returned (stop-outs); (3) attended one or two semesters, dropped out, but again registered at RCC (in-outs); (4) attended all four semesters but had not graduated (persisters); and (5) graduated by the end of the fourth semester with a degree or certificate (graduates). The following personal and academic characteristics were used in the analysis: sex, age, marital status, high school and college background, new/transfer status, full-/part-time status, educational objective, major, grade point average (GPA), credit-completion ratio (CCR), financial aid, placement test scores, and academic status. The study revealed that of the fall 1979 entering group ($N=2,005$), 28% were non-persisters, 32% were stop-outs, 5% were in-outs, 29% were persisters, and 5% were graduates. Graduates were found in especially high proportions among candidates for certificates, students whose CCR's were 1.00, and students with GPA's of 3.0 to 3.4. Persisters were found in especially high proportions among students who completed 80% to 99% of the credits attempted and students with GPA's between 2.0 and 2.9. High proportions of non-persisters had no particular degree objective. Data tables and comparisons with a four-semester persistence study of fall 1975 entering students are provided. (AYC)

<u>Table</u>	<u>Page</u>
1. Persistence Rates Over Four Semesters, by Program	5
2. Dominant Sub-Groups Among Entering Students, by Three Persistence Categories	10

A. Introduction

As outlined in Student Flow Program (KSFP Report No. 1), a set of "persistence" reports will be prepared for each of two entering groups, Fall 1979 and Fall 1980. Each set will consist of two reports, summarizing persistence over four and six semesters, respectively. These reports will be based on the analysis prepared at the system level for Fall 1975 entering students (of which Kapiolani was a part) with two modifications: two persistence categories have been reworded and four characteristics have been added.

The persistence categories¹ used in this study are based on the number and proportion of Fall 1979 entering students who:

- attended only one, their first, semester (non-persister)
- attended two or three consecutive semesters, dropped out and never returned to Kapiolani (stop-out)
- attended one or two semesters, dropped out but again registered at Kapiolani (in-out)
- attended all four semesters but who had not graduated at the end of the fourth semester (persister)
- graduated by the end of the fourth semester with either a degree or certificate (graduate)

The following personal and academic characteristics were used in analyzing persistence:

- from the earlier study: sex, age, marital status, high school background, previous college attended, entry status (new or transfer), enrollment status (full- or part-time), educational objective, program, grade point average (GPA), credit-completion ratio (CCR)²
- added for this analysis: financial aid award, math and English placement test scores, academic status.

¹ The second and third categories have been reworded.

² Age and entry status as of Fall 1979; marital status, educational objective, program, cumulative grade point average and cumulative credit-completion ratio during last semester of attendance; full-/part-time status is based on total credits attempted divided by number of semesters attended.

³ Financial aid category and placement test score as of Fall 1979; academic status during last semester of attendance.

Chi-square analysis was applied through the use of the Statistical Package for the Social Sciences (SPSS). However, the results of such analysis are ignored if more than 25 percent of the valid cells have expected frequencies less than five.

This report, the first for the Fall 1979 entering group, features:

- findings in the form of summaries/discussions of: (1) data for Fall 1979 entering students which show the group, by characteristic, that had the highest (higher) proportion in selected persistence categories (non-persister, persister, graduate)⁴ and (2) program data.
- comparisons of the persistence patterns of the Fall 1979 and Fall 1975 entering groups at the end of the fourth semester.
- appendices containing the details for the Fall 1979 entering group, as well as for the major program areas.

B. Findings: For Fall 1979 Entering Group

The data related to the persistence over four semesters, of the Fall 1979 entering group (2,005 students), as presented in Appendix A, can be briefly summarized:

	<u>Number</u>	<u>Percent</u>
Non-Persister	564	28%
Stop-Out	650	32%
In-Out	108	5%
Persister	588	29%
Graduate	95 ⁵	5%

Data analysis revealed that there were statistically significant differences at the .001 level in the persistence patterns of Fall 1979 entering students on 12 of the 15

⁴For example, by age, the highest proportion of non-persisters, 46 percent, was for students 25-29 years old. That is, 46 percent of all entering students 25-29 years old (91 of 200) attended KCC for only one semester. This proportion is quite different from the one represented by 91 of 564 non-persisters (column percent).

⁵It is interesting to note that 48 of these graduates re-registered at Kapiolani.

characteristics.⁶ To illustrate these differences, the following data show the group, by characteristics, that had the highest (higher) proportion in each of the three categories of persistence: graduate, persister, and non-persister. These groups comprised close to two-thirds of the Fall 1979 entering students.

	<u>Non-Persister</u> (1 Sem.)	<u>Persister</u> (4 Sem.)	<u>Graduate</u>
TOTAL	28%	29%	5%
Sex***	30% males	31% females	6% females
Age***	46% 25-29 years	36% below 19 years	9% over 29 years
Marital Status***	44% married	30% single	10% married
High School Background***	41% other	32% Public, Oahu; foreign	10% U.S. Mainland & Possessions
Entry Status***	35% transfer	32% new	9% transfer
Educational Objective***	58% other	39% A.S.	20% certificate
Math Placement Test Score***	42% no score	43% Math 25	8% Math 25
Eng Placement Test Score***	41% no score	38% Eng 22 or 50	9% Eng +100
Enrollment Status***	37% part-time	38% full-time	8% full-time
Cum GPA***	44% below 2.0	52% 2.0-2.9	13% 3.0-3.4
Cum CCR***	52% below .50	61% .80-.99	12% 1.00

The data for Fall 1979 entering students show that:

- 5 percent were graduates by the end of four semesters. Graduates were found in especially high proportions among:
 - candidates for certificates (20%)
 - students whose CCRs were 1.00 (12%) and students with GPAs of 3.0-3.4 (13%)

⁶ For "previous college attended", "financial aid award" and "academic status", more than 25 percent of the valid cells had frequencies less than five so data on these characteristics are omitted in our list. However, Appendix A contain details on these characteristics.

- 29 percent were persisters. In general, the persistence rates ranged from 30 to 39 percent range (8 characteristics). However, higher proportions were found for:
 - students with a Math 25 placement test score. (43%)
 - students who completed 80 to 99 percent of their credits (61%) and students with 2.0-2.9 GPAs (52%)
- 28 percent were non-persisters. The majority of rates fell in the 41 to 46 percent range, with especially high proportions of non-persisters among:
 - students with no particular degree objective (58%)
 - students whose CCRs were below .50 (52%)

For three characteristics (age, cumulative GPA and cumulative CCR) means were also calculated. The data show:

	<u>Overall Mean</u>	<u>Range, by Persistence Category</u>
Age, in Years	21.50	20.50 (stop-outs) to 23.80 (graduates)
Cumulative GPA	2.40	1.90 (in-outs) to 3.12 (graduates)
Cumulative CCR	0.61	0.38 (non-persisters) to 0.94 (graduates)

These means should be used cautiously and in conjunction with the other data. For this reason, the details are included in the appropriate section of Appendix A.

C. Findings: By Program

Always of special interest to campus personnel are program data (Table 1). It is not surprising to find that there was a statistically significant difference in persistence rates, at the .001 level, among students in the various programs at KCC. The data show these higher proportions, compared to the overall rates, for: graduates among health services majors (36% vs 5%), persisters among public service majors (47% vs 29%) and non-persisters among other (unclassified/special) students (58% vs 28%). These results are not surprising given the nature of the health and public service programs and the educational objectives of the unclassified student.

2 OUT OF 30 (6.7%) OF THE VALID CELLS HAVE EXPECTED CELL FREQUENCY LESS THAN 5.0.
 MINIMUM EXPECTED CELL FREQUENCY = 1.421
 RAW CHI SQUARE = 460.7582 WITH 20 DEGREES OF FREEDOM. SIGNIFICANCE = 0.0

Because of the high interest in program details, additional tables, by characteristics, were prepared for each of the major programs at KCC and are presented in Appendix B. A study of those tables revealed that persistence rates among the programs differed, by characteristics, as follows:

- entry and enrollment status for three programs
- marital status, educational objective, cumulative GPA and cumulative CCR for two programs
- sex and academic status for one program

In preparing the following highlights, 20 students was set as the minimum number in each persistence category (graduate, persister, non-persister) for including details, by characteristic. When numbers are small, percentage distributions can be misleading.

1. Liberal Arts (Table B-1): 834 Entering Students

After four semesters, more than one-third (37%) of these entering students had attended two or three consecutive semesters but were no longer registered at KCC and more than a fourth had attended only their entry semester (28%). While a large number were no longer at KCC, approximately one-fourth of the entering group had enrolled for all four semesters (persisters, 27%). Data in Appendix B-1 indicate that especially high proportions of the following subgroups were found to be:

a. Graduates: 8 (1 percent)

- 7 continuing at KCC

b. Persisters: 226 (27 percent)

- females (32%)
- new students (31%)
- students recommended to take Math 25 (40%)
- students recommended to take Eng 22 or 50 (39%)
- full-time students (33%)
- students who earned a GPA of 2.0-2.9 (48%)
- students who earned a CCR of .80-.99 (57%)

c. Non-Persisters: 236 (28 percent)

- males (31%)
- married students (40%)
- transfer students (37%)
- students without placement test scores (39% Math, 38% English)
- part-time students (36%)
- students who earned a GPA below 2.0 (44%)
- students who earned a CCR below .5 (50%)
- probationary students (54%)

2. Business Education (Table B-2): 555 Entering Students

While one-third of the entering students had enrolled for four consecutive semesters without graduating (persisters, 33%), more than half were no longer registered at KCC (two or three consecutive semesters, 33%; non-persisters, 26%). Data in Appendix B-2 indicate that especially high proportions of the following subgroups were found to be:

a. Graduates: 26 (5 percent)

- 17 continuing at KCC
- students awarded certificates (11%)
- students who earned GPAs of 3.0-3.4 (10%)
- students who earned CCRs of 1.00 (11%)

b. Persisters: 184 (33 percent)

- below 19 years old (42%)
- students recommended for Math 25 (58%)
- students recommended for Eng 22 or 50 (43%)
- full-time students (42%)
- students who earned GPAs of 2.0-2.9 (59%)
- students who earned CCRs of .80-.99 (66%)

c. Non-Persisters: 143 (26 percent)

- males (32%)
- older than 29 years (45%)
- married students (43%)
- students with other than a high school degree (43%)
- transfer students (37%)
- students without placement test scores (34%)
- part-time students (33%)
- students who earned GPAs below 2.0 (41%)
- students who earned CCRs below .5 (49%)
- probationary students (47%)

3. Health Services (Table B-3): 124 Entering Students

Although persistence rates for entering students in health service programs differed significantly on only one characteristic (educational objective), notable are the relatively high proportions of students who were graduates (36%) and persisters (36%). Data in Appendix B-3 indicate that these groups of students tended to be:

a. Graduates: 45 (36 percent)

- 10 continuing at KCC
- females (45%)
- married students (50%)
- students awarded certificates (61%)
- students recommended for Math 25 (59%)
- students who earned GPAs of 3.0-3.4 (50%)
- students who earned CCRs of 1.00 (67%)

b. Persisters: 45 (36 percent)

- males (53%)
- below 19 years (55%)
- seekers of A.S. degrees (61%)
- students who earned CCRs of .80-.99 (61%)

c. Non-Persisters: 16 (13 percent)

4. Food Services/Hotel Operations (Table B-4): 284 Entering Students

More than two-thirds of this entering group can be accounted for by either of the following groups: persisters (37%) and students who attended two or three consecutive semesters but are no longer enrolled at KCC (33%). Another fifth of the group became non-persisters (20%). While persistence rates differed significantly on only two characteristics (entry status and enrollment status), higher proportions of these subgroups tended to be:

a. Graduates: 11 (4 percent)

- 9 continuing at KCC

b. Persisters: 106 (37 percent)

- transfer students (46%)
- seekers of A.S. degrees (41%)
- full-time students (45%)
- students who earned GPAs of 3.0-3.4 (57%)
- students who earned CCRs of .80-.99 (69%)

c. Non-Persisters: 57 (20 percent)

- part-time students (27%)
- students who earned GPAs below 2.0 (36%)
- students who earned CCRs below .5 (49%)

5. Other Programs (Table B-5, Table B-6)

The public service (legal assistant) program enrolled 30 students of the Fall 1979 entering group. Due to the small number, many of the valid cells had frequencies less than five and the results of chi-square analysis were disregarded. However, given the nature of the program and the fact that all but one of the students registered part-time,⁷ it is not surprising to see in Appendix B-5 that nearly half of the students were persisters (47%).

For the group of 178 unclassified/special students, there were no statistically significant differences in persistence rates on any of the characteristics. It is understandable, because of the "goals" of these students, that most of the group are no longer registered at KCC (Appendix B-6), having registered for only their entry semester (58%) or for two/three consecutive semesters (25%).

Summary and Concluding Comments

Analysis of the data contained in Appendix A and Table 1 revealed that for the Fall 1979 entering group there were statistically significant differences on all but three of the fifteen characteristics studied. Further study of data at the program level (Appendix B) indicated that five of the six program areas enrolled more than 50 students from the entering group. However, in analyzing persistence rates, by various characteristics, we found many instances where more than 25 percent of the valid cells had frequencies fewer than five. In such cases, the results of chi-square analysis are disregarded. For this reason, the number of characteristics (14 possible) for which there are statistically significant differences in the persistence patterns of students in a program is small:

- 6 for liberal arts: sex, marital status, entry status, enrollment status, cumulative GPA, cumulative CCR

⁷ The one student who registered full-time did not continue after the entry semester.

- 7 for business: marital status, entry status, educational objective, enrollment status, cumulative GPA, cumulative CCR, academic status
- 1 for health services: educational objective
- 2 for food services/hotel operations: entry status, enrollment status

For unclassified students, there were no statistically significant differences, and the public service (legal assistant) program enrolled fewer than 50 entering students in Fall 1979.

1. Comparison of Fall 1975 and Fall 1979 Entering Students

Ten of the characteristics used in studying persistence rates were the same for both the Fall 1975 and Fall 1979 entering groups. A comparison of the two groups is made by showing the sub-group, by characteristic, that had the highest (higher) proportion in three persistence categories (non-persister, persister, graduate).

See details in Table 2.

	52% below .5	61% .80-.99	12% 1.00

^aLevels of significance, based on chi-square analysis, are denoted thus:
*.05, **.01, ***.001.

^bThe study for Fall 1975 entering students used different CCR groupings which are not comparable to the Fall 1979 groupings.

The data presented in Table 2 show that the Fall 1979 entering group had slightly lower persister and graduation rates than the Fall 1975 group (29% vs 32% and 5% vs 9%, respectively) but higher non-persister rates (28% vs 24%). We found statistically significant differences at the .001 level in the persistence patterns for both entering groups on all ten characteristics: sex, age, marital status, high school background, entry status, educational objective, enrollment status, cumulative GPA, cumulative CCR, and program. For

both entering groups:

- A high proportion of health services majors were graduates; a high proportion of unclassified/special students were non-persisters.
- A high proportion of full-time students were either persisters or graduates; a high proportion of part-time students were non-persisters.
- A high proportion of students who "succeeded", as shown by GPAs and CCRs, were persisters or graduates; a high proportion of "unsuccessful" students were non-persisters.

However, the older students had the highest proportion in the graduate and non-persistent categories in Fall 1979. For example, the dominant subgroups for graduates were: over 29 (Fall 1979) and 22-24 (Fall 1975).

2. Concluding Comments

For the most part, our analysis of persistence rates for the Fall 1979 entering group reveals no surprising results. For example, the high graduation rates for health services majors is understandable because of the one-year practical nursing program; the high persistence rates for public service majors because of the nature of the clientele and of the program; and the higher non-persistent rates for liberal arts majors because of transfer possibilities; and the higher non-persistent rates for unclassified/special students because they are usually not seeking degrees.

In reviewing the data presented in this report, campus personnel should keep the following in mind: (a) the general entering characteristics of the different groups of students (these data are included in Appendix C for the Fall 1979 entering group and, when available, for the Fall 1975 group) and (b), a second report, persistence over six semesters, will be prepared for the Fall 1979 entering students after the completion of this academic year, 1981-82.

For many community college students, non-continuance is not uncommon and in many cases, not avoidable. However, we should try to find out what can be done to maximize the opportunities for those students who are still on campus. We should also try to facilitate the return of students interested in continuing their education. Our study of the Fall 1980 entering group will be more comprehensive in these areas in the form of related survey (continuing, non-continuing and alumni) data.
